

AquaSwiss AG is a globally oriented player in the Water Desalination Industry with knowledge and experience through the acquisition of leading desalination technologies.

The company's headquarters is in Frauenfeld, Switzerland with project offices in various locations in Middle East. AquaSwiss offers an interesting package including high quality insurances. We are accepting expressions of interest for an

Erection and Commissioning (E&C) – Engineer

(Based in Frauenfeld, Switzerland)

Tasks and responsibilities:

- The E&C-Engineer shall be responsible for installation, erection, pre-commissioning, commissioning and start-up of all process plant and equipment associated with water treatment and desalination. He /she accompanies the plant installation team and familiarizes himself with the process, participates in screenings and studies, contributes to operation write-ups, supervises plant operation and provides trouble shooting . He / she takes care of client operators training and will remain in the project until final acceptance and hand over of the plant to the customer.
- He / she provides multi-discipline input into scheduling, designing and planning of projects.
- The responsibilities of the E&C-Engineer include reviewing, approving and overseeing the installation. In addition, the E&C-Engineer must review and approve all multi-discipline processes to ensure compliance with the procedures, specifications and standards of the project. It is the E&C-Engineer's responsibility to make sure that all procedures follow all appropriate safety practices and procedures. The E&C-Engineer must audit installation and commissioning activities to ensure compliance with environmental, quality, and safety requirements. The E&C-Engineer efficiently communicates with the head office and the engineering department in Switzerland. He/she is responsible for regularly monitoring and reporting the installation and commissioning progress.

Education & experience:

- Engineering degree (B.Eng.) in mechanical / electrical / process engineering.
- Minimum 10 years industry experience with focus on water treatment / desalination technology
- Hands-on project management experience
- Several years of experience in supervising and managing the full cycle of installation and commissioning of reverse osmosis plants
- Perfect command of English with particular emphasis on technical terminology

Skills required:

- Able to prioritize workload and meet deadlines
- Effective analytical and problem solving skills
- Thorough understanding of customer's requests
- Considerable endurance and a strong sense of responsibility
- Proficiency in Microsoft Office
- Willingness to travel and stay within the region of our projects (primarily countries in ME and Africa) as per the needs of the project
- EU / EFTA citizen

If you enjoy working in an international environment and value the opportunity to contribute beyond the immediate accountabilities of the role, please send your complete application and CV (in English) to hr@aquaswiss.eu
